

ABSTRACT OF THE DISCLOSURE

An eyeglass case comprises a cover including a lengthwise first groove along one side, a lengthwise second groove adjacent and parallel to the first groove, and a lengthwise third groove along the other side; a body including a lengthwise
5 ridge along one side pivotably fitted in the first groove, a lengthwise fourth groove below the ridge, a lengthwise member having a section of V between the ridge and the third groove, and a lengthwise fifth groove along the other side; two side members releasably coupled to the cover and the body, each side member having an interior recess for facilitating of closing the cover onto the body; and two
10 snapping members each having a section of C, a top end clung in the second groove, and a bottom end clung in the third groove for pivotably securing the cover to the body.
